This is the difficult part for the majority...

The palms sweating, waiting for the setup and being content if it does not come.

Hopefully you can see how we are not just randomly plunging in with orders...

We require price to present us a setup or we wait longer... that is analysis done right.

The Inner Circle Trader  
@TheICT

I see a FVG

Let's see if it pumps to it from here. It might remain too heavy and speedily run for 3855, worst case.

Do not chase it... relax.

You are learning something very important this morning.

@TheICT107

When a FVG is used for a Short idea, where does the stop loss get placed?

What invalidates a Short?

**is on the ICT**

## PLAN THE ICT

If the trade idea is engaged and the conditions are High Volatility we use the swing High for stop loss.

If the FVG Premium High or upper boundary is traded above initially, this is permissible.

If it trades back above it after going under the Discount Low, this saves your stop

Knowing how to enter is not enough.

You have to know how to manage the idea, once in it.

Stops are insurance... like Term Life Insurance. If you don't use it, get your money back & close the idea without a full loss.

Holding with "it has to pan out like I want", kills traders

Now with that said...

We took out the 9:30 High on ES. See that?

We are back under our FVG.

Study that as a shirt idea again.

Correct

**The Inner Circle Trader** @I\_Am\_The ICT

If the trade idea is engaged and the conditions are High Volatility we use the swing High for stop loss.

If the FVG Premium High or upper boundary is traded above initially, this is permissible.

If it trades back above it after going under the Discount Low, this saves your stop

**The Inner Circle Trader**  
@AmTheICT

I lost my place and last tweet to continue linking it...

We would want to see weakness here.

A return to 3905 removes interest in the AM session going to 3872 Sellside then 3853 Sellside.

Now we move to neutral.

The market has shown what?

It is rangebound and the real moves will be in the PM session.

Note the time.

The Inner Circle Trader

@IamTheICT

You want to find trades.

You want to know where it is going next.

You can't get there without knowing these more important lessons.

When to stop.

Why wait?

When does it tell me odds reduce?

Understand?

@TheInnerCircleTrader

I favor 3853.

Why?

We tried going higher and took the 9:30 High out... but failed.

We left the 8:30 lows in place and there is a lot of interest under 3853 imo.

Only those wanting to be trained see the importance of this style of teaching.

Telling you to short or buy something teaches you nothing.

I am teaching you how to read the Tape... or understand why Price should do or not do something.

Something nobody else does.

What did I say earlier today?

It became 50/50 correct?

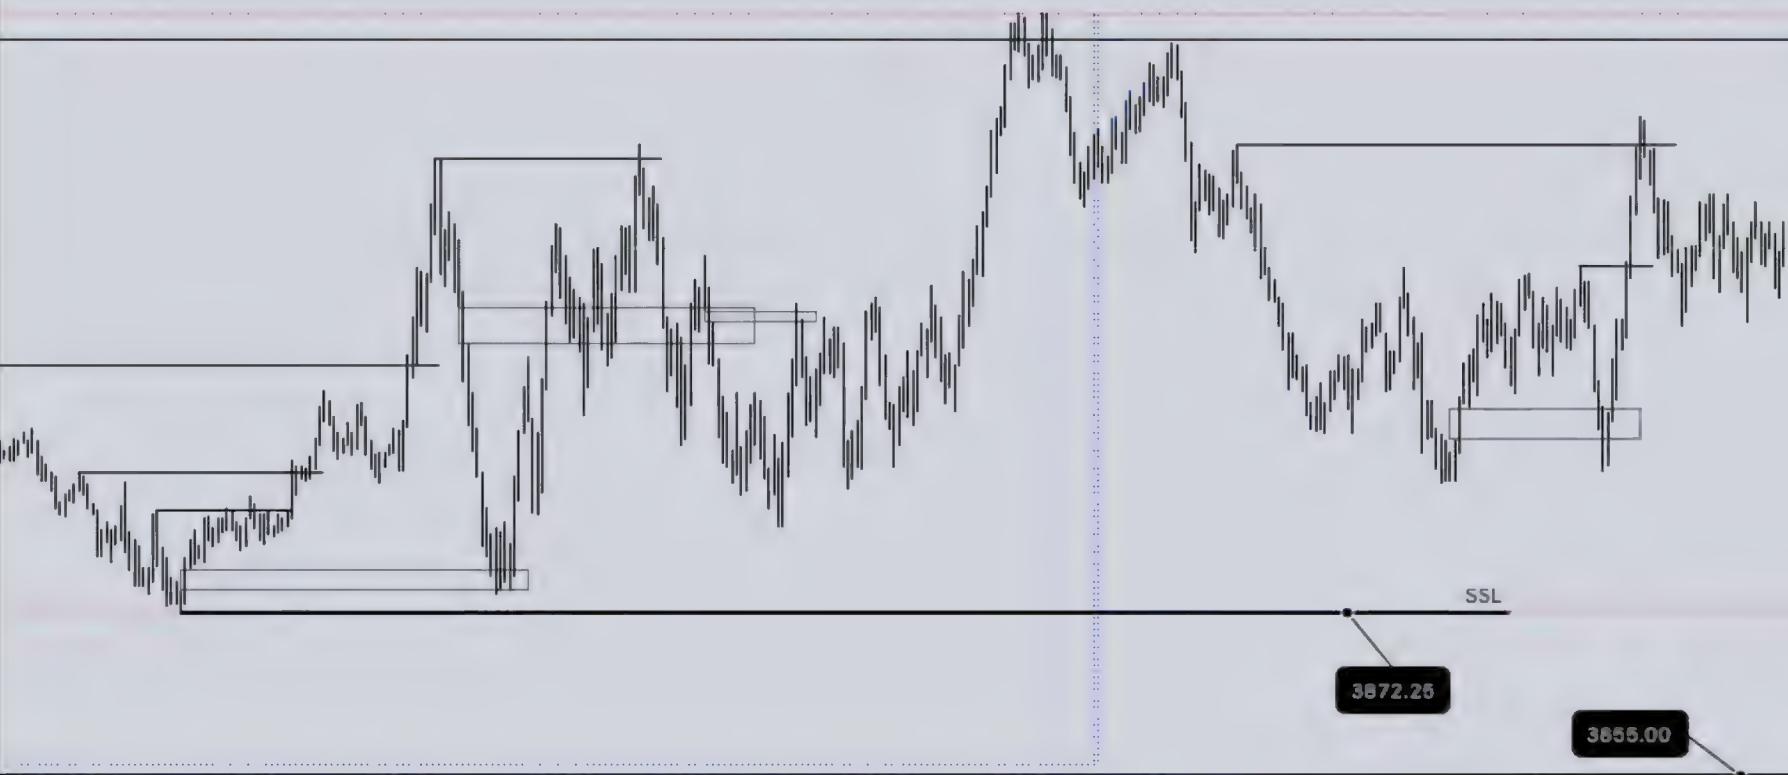

How has the Price Action been all day?

Sideways right?

3pm to 4pm study how it trades then.

**The Inner Circle Trader**  
@TheInnerCircleTrader

I said, and you can go back and verify...

The sellside is 3872 and 3855. I prefer and favor those.

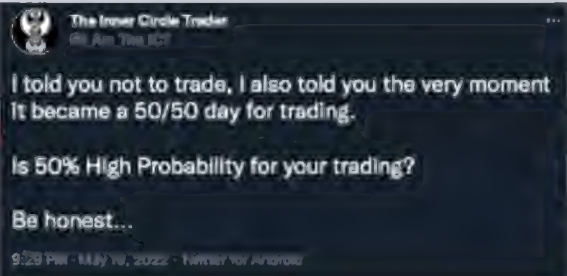

I outlined the daily range as consolidation and walked you through how traders would try to use their day and hours in this profile.

I called 3933.25 & said they'd take it there

@AmTheICT

Shorts get squeezed and offer Buyside on higher price delivery.

How is this useful?

S&P 500 - May 19, 2022 - Twitter for Android

S&P 500 E-mini Futures, 1, CME\_MINI

**The Inner Circle Trader**  
@I Am The ICT

Shorts give up Buyside to Short Sellers at a Higher Market Price.

Longs place Sell Stops under the lows. Who would benefit from this?
